CHAPTER – I

INRODUCTION AND DESIGN OF THE STUDY

1.1 INTRODUCTION

In recent years, the growing concern about environmental degradation and climate change has led to a significant shift in consumer behaviour and preferences. With increasing awareness about the impact of human activities on the environment, consumers are becoming more conscious of the products they buy and the companies they support. As a result, there is a growing demand for green products that are environmentally friendly, sustainable, and socially responsible. However, despite the growing interest in green products, many consumers' still lack awareness and understanding of what constitutes a green product and how it benefits the environment. This knowledge gap can lead to confusion, skepticism, and ultimately, a lack of adoption of green products. Therefore, understanding consumer attitude and awareness towards green products is crucial for businesses and policymakers to develop effective strategies to promote sustainable consumption and reduce environmental harm. The growing awareness about environmental issues like global warming, pollution, and deforestation has led to a surge in interest for green products, with consumers, especially younger generations, becoming more conscious of the environmental and social impact of their purchasing decisions.

Understanding consumer attitude and awareness towards green products is crucial for businesses to develop effective marketing strategies, product development, and pricing, and for policymakers to create regulations and incentives promoting sustainable consumption and production, ultimately, contributing to a more sustainable future by encouraging responsible consumption and production patterns.

1.2 IMPORTANCE OF THE STUDY

The study on Consumer Attitude and Awareness on Green Products is important because it addresses critical environmental concerns and consumer behaviour in the context of sustainability. In today's world, where environmental degradation, such as the depletion of the ozone layer and forest destruction, is becoming increasingly alarming, the need for eco-friendly products is more significant than ever. This study helps in understanding the factors influencing consumer behaviour toward green products, such as environmental knowledge, values, attitudes, and income levels. It highlights the importance of sustainable consumption and the role businesses play in adopting eco-friendly practices to attract environmentally conscious consumers. Additionally, it sheds light on the benefits of green products, such as reduced carbon footprints, better health outcomes, and the promotion of sustainable practices. By investigating consumer attitudes, this research can help companies develop better strategies for marketing green products and enhancing public awareness of environmental sustainability.

1.3 STATEMENT OF THE PROBLEM

The statement of the problem in the study on Consumer Attitude and Awareness on Green Products focuses on the increasing environmental challenges and the pivotal role of consumer behaviour in addressing them. Despite growing awareness of environmental issues such as climate change, pollution, and resource depletion, the adoption of green products remains inconsistent among consumers. The key issue lies in understanding why consumers, despite being aware of the environmental benefits, are hesitant or inconsistent in purchasing eco-friendly products. One major aspect of this problem is the lack of consumer awareness and knowledge regarding the green products.

Many consumers do not fully understand what constitutes a green product or how such products contribute to environmental sustainability. Lastly, demographic factors such as age, education, and income levels have an impact on consumer attitudes and behaviour toward green products. However, it is unclear to what extent these factors influence purchasing decisions. The study seeks to explore how these demographic variables shape consumer preferences and whether targeted strategies can effectively encourage sustainable consumption across different consumer groups. Consumer awareness is highly significant for the environment when purchasing green products instead of regular products. Hence, it is important to understand the consumers awareness towards green products.

1.4 SCOPE OF THE STUDY

The study aims to explore consumer attitudes toward green products, focusing on how environmental concerns, personal values, and social influences shape purchasing behaviour. This includes investigating the extent to which consumers are informed about the benefits of green products and their willingness to pay a premium for sustainability.

The study further explores the effectiveness of green marketing and the role of businesses in promoting sustainable products. It seeks to understand how companies communicate the environmental benefits of their products and whether consumers trust these claims. The research will analyze consumer skepticism about green washing and its impact on purchasing decisions. The scope of the study covers a comprehensive examination of consumer attitudes, awareness, influencing factors, and marketing strategies related to green products. The research will provide valuable insights for businesses, policymakers, and environmental advocates looking to promote sustainable consumption practices and reduce environmental impacts through info.

1.5 OBJECTIVES OF THE STUDY

- To assess and evaluate the factors facilitate the consumption of organic products in the study area.
- To know the awareness among the consumers towards green products
- To analyze the challenges faced by consumers while using the green products.
- To offer some valuable suggestions among customers towards the green products

1.6 RESEARCH METHODOLOGY

This chapter deals with the description of methodology and the methodology of study includes the description of research design, population sample size, sampling technique, development and description of tools, data collection procedure and methods of analysis.

1.7 AREA OF STUDY

The data collected from this study covers Salem city only.

1.8 SOURCE OF DATA

The study is based on primary data and secondary data.

- Primary data was collected by the questionnaire.
- Secondary data was collected by the internet, books, journals, articles, magazines and research reports

1.9 SAMPLING

Sampling is a subject of the population selected for a particular study and members of the sample are study projects. The sample for the study will be consumers of organic products in Salem city.

1.10 SAMPLE SIZE

A sample size consists of 100 respondents who are consuming organic products, The sample size is selected by adopting random sampling techniques.

1.11 SAMPLE DESIGN

The questionnaire was initially prepared with a sample of 100 respondents Their responses for their questionnaires were scrutinized to identify deficiencies in the structure and wording of questions, On the basis of this questions were added, removed or modified.

The questionnaire in divided into two parts

- ✓ Personal data
- ✓ Preference and satisfactions of consumers towards green products

1.12 TOOL FOR ANALYSIS

- **SIMPLE PERCENTAGE ANALYSIS**

  The simple percentage Analysis refers to a special kind of rates percentage are used in making comparison between two or more series of data.

1.13 LIMITATIONS OF THE STUDY

- The study is based on the representative sample group selected from total population, So, it will not cover the whole customer, The survey was Limited to a sample size of' 100 respondents in Salem city.
- This Information provided by the respondents is purely based on the memory only, The quality and reliability of the data collected is depended upon Ile memory recall of the respondents.

1.14 CHAPTER SCHEME

CHAPTER I - It deal with Introduction and design of the study.

CHAPTER II - It deals with relevant Review of literature.

CHAPTER III - It deals with conceptual background of the study.

CHAPTER IV - It deals with analysis and interpretation of data.

CHAPTER V - It deals with summary of findings, suggestions and conclusion.
