CHAPTER – I

INRODUCTION AND DESIGN OF THE STUDY

1.1 INTRODUCTION

In recent years, the growing concern about environmental degradation and climate change has led to a significant shift in consumer behaviour and preferences. With increasing awareness about the impact of human activities on the environment, consumers are becoming more conscious of the products they buy and the companies they support. As a result, there is a growing demand for green products that are environmentally friendly, sustainable, and socially responsible. However, despite the growing interest in green products, many consumers' still lack awareness and understanding of what constitutes a green product and how it benefits the environment. This knowledge gap can lead to confusion, skepticism, and ultimately, a lack of adoption of green products. Therefore, understanding consumer attitude and awareness towards green products is crucial for businesses and policymakers to develop effective strategies to promote sustainable consumption and reduce environmental harm. The growing awareness about environmental issues like global warming, pollution, and deforestation has led to a surge in interest for green products, with consumers, especially younger generations, becoming more conscious of the environmental and social impact of their purchasing decisions.

Understanding consumer attitude and awareness towards green products is crucial for businesses to develop effective marketing strategies, product development, and pricing, and for policymakers to create regulations and incentives promoting sustainable consumption and production, ultimately, contributing to a more sustainable future by encouraging responsible consumption and production patterns.

1.2 IMPORTANCE OF THE STUDY

The study on Consumer Attitude and Awareness on Green Products is important because it addresses critical environmental concerns and consumer behaviour in the context of sustainability. In today's world, where environmental degradation, such as the depletion of the ozone layer and forest destruction, is becoming increasingly alarming, the need for eco-friendly products is more significant than ever. This study helps in understanding the factors influencing consumer behaviour toward green products, such as environmental knowledge, values, attitudes, and income levels. It highlights the importance of sustainable consumption and the role businesses play in adopting eco-friendly practices to attract environmentally conscious consumers. Additionally, it sheds light on the benefits of green products, such as reduced carbon footprints, better health outcomes, and the promotion of sustainable practices. By investigating consumer attitudes, this research can help companies develop better strategies for marketing green products and enhancing public awareness of environmental sustainability.

1.3 STATEMENT OF THE PROBLEM

The statement of the problem in the study on Consumer Attitude and Awareness on Green Products focuses on the increasing environmental challenges and the pivotal role of consumer behaviour in addressing them. Despite growing awareness of environmental issues such as climate change, pollution, and resource depletion, the adoption of green products remains inconsistent among consumers. The key issue lies in understanding why consumers, despite being aware of the environmental benefits, are hesitant or inconsistent in purchasing eco-friendly products. One major aspect of this problem is the lack of consumer awareness and knowledge regarding the green products.

Many consumers do not fully understand what constitutes a green product or how such products contribute to environmental sustainability. Lastly, demographic factors such as age, education, and income levels have an impact on consumer attitudes and behaviour toward green products. However, it is unclear to what extent these factors influence purchasing decisions. The study seeks to explore how these demographic variables shape consumer preferences and whether targeted strategies can effectively encourage sustainable consumption across different consumer groups. Consumer awareness is highly significant for the environment when purchasing green products instead of regular products. Hence, it is important to understand the consumers awareness towards green products.

1.4 SCOPE OF THE STUDY

The study aims to explore consumer attitudes toward green products, focusing on how environmental concerns, personal values, and social influences shape purchasing behaviour. This includes investigating the extent to which consumers are informed about the benefits of green products and their willingness to pay a premium for sustainability.

The study further explores the effectiveness of green marketing and the role of businesses in promoting sustainable products. It seeks to understand how companies communicate the environmental benefits of their products and whether consumers trust these claims. The research will analyze consumer skepticism about green washing and its impact on purchasing decisions. The scope of the study covers a comprehensive examination of consumer attitudes, awareness, influencing factors, and marketing strategies related to green products. The research will provide valuable insights for businesses, policymakers, and environmental advocates looking to promote sustainable consumption practices and reduce environmental impacts through info.

1.5 OBJECTIVES OF THE STUDY

- To assess and evaluate the factors facilitate the consumption of organic products in the study area.
- To know the awareness among the consumers towards green products
- To analyze the challenges faced by consumers while using the green products.
- To offer some valuable suggestions among customers towards the green products

1.6 RESEARCH METHODOLOGY

This chapter deals with the description of methodology and the methodology of study includes the description of research design, population sample size, sampling technique, development and description of tools, data collection procedure and methods of analysis.

1.7 AREA OF STUDY

The data collected from this study covers Salem city only.

1.8 SOURCE OF DATA

The study is based on primary data and secondary data.

- Primary data was collected by the questionnaire.
- Secondary data was collected by the internet, books, journals, articles, magazines and research reports

1.9 SAMPLING

Sampling is a subject of the population selected for a particular study and members of the sample are study projects. The sample for the study will be consumers of organic products in Salem city.

1.10 SAMPLE SIZE

A sample size consists of 100 respondents who are consuming organic products, The sample size is selected by adopting random sampling techniques.

1.11 SAMPLE DESIGN

The questionnaire was initially prepared with a sample of 100 respondents Their responses for their questionnaires were scrutinized to identify deficiencies in the structure and wording of questions, On the basis of this questions were added, removed or modified.

The questionnaire in divided into two parts

- ✓ Personal data
- ✓ Preference and satisfactions of consumers towards green products

1.12 TOOL FOR ANALYSIS

- **SIMPLE PERCENTAGE ANALYSIS**

  The simple percentage Analysis refers to a special kind of rates percentage are used in making comparison between two or more series of data.

1.13 LIMITATIONS OF THE STUDY

- The study is based on the representative sample group selected from total population, So, it will not cover the whole customer, The survey was Limited to a sample size of' 100 respondents in Salem city.
- This Information provided by the respondents is purely based on the memory only, The quality and reliability of the data collected is depended upon Ile memory recall of the respondents.

1.14 CHAPTER SCHEME

CHAPTER I - It deal with Introduction and design of the study.

CHAPTER II - It deals with relevant Review of literature.

CHAPTER III - It deals with conceptual background of the study.

CHAPTER IV - It deals with analysis and interpretation of data.

CHAPTER V - It deals with summary of findings, suggestions and conclusion.

CHAPTER II

REVIEW OF LITERATURE

2.1 INTRODUCTION

Green Marketing has been an important academic research topic since the shijet estond in the late 1970s. From then on, there have been numerous research studies under the issues of marketing of eco-friendly commodities and behaviour of consumers with respect to such products. This chapter is aimed at providing a conceptual understanding on the research problem, by presenting some of the theoretical and methodological contributions on this area. A few of them are presented in this chapter which has given the researcher, a scope to plan the current study

2.2 REVIEW OF RELATED LITERATURE

Nilan Naidu (2020)[1] tries to conduct a study on consumers' attitude towards green marketing. According to American Marketing Association (AMA) the green marketing is the marketing of product data presumed to be environmentally safe. This research paper studies the awareness among customers regarding green marketing and their readiness towards buying green products and paying high prices for the same. Marketing of green products that are presumed to be environmentally preferable to others. The research studies the consumer opinion and behaviour on green products. To achieve this goal, a structured questionnaire was distributed to 160 people. The respondents were divided into eight categories using a random sampling method. Overall, 65 % of the people are aware of the concept of Green Marketing and Green products. Consumers who are in favour of green products are feeling worth buying green products and consumers who reject Green products find its price too high.

Santhosh.V and Raghavendra Babu (2020)[2] involves in a study on women consumer's attitudes towards green marketing. Green Marketing plays a prominent role in the development of the modern market. This research examine the present trend of green marketing and its future. this research is a descriptive research design and for research purposes, convenience sampling was used and the sample size was restricted to 25 women respondents only and For data analysis, the Standard Deviation techniques were used. In the final analysis, buyers, commercial consumers, and suppliers want to minimize the adverse effects of modern life on the environment. It also suggests that People are not aware of the subsidy on green products, so manufacturers should make a greater effort to provide this information to the general public.

Usharani .M and Gopinath .R (2020)[3] examines the study consumer behavior on green marketing with reference to organic food products in Tiruchirapalli District. Marketing of green products that are presumed to be environmentally preferable to others. This study is conducted to know the problem faced by using non-organic products. The data are collected from structured questionnaires and various books and journals and 175 samples are collected under random sampling method. This study concludes that it is the right time to select green products globally. And also it suggests arranging campaigns for green marketing.

Solayappan Annamalai (2020)[4] analyses the study the consumer perceptions on green marketing. Marketing points out that attitude change happens because a person decides to purchase product and services. This research paper attempts to examine the green marketing of Green Products Purchase by consumer's perspective and its benefits analyzed. The study was conducted by taking 400 customers who are belonging to the study area and convenience sampling method was used in this study and also the surveying method used to collect the data.

Johnsi Gloria and Suresh.S (2020)[5] studies the sources of consumer awareness towards green products and its impact on purchasing decisions in Tiruchirapalli. For data analysis the respondents were selected through convenience sampling technique and the sample size considered for the study is 400 respondents. The collected data were analyzed using a statistical package for social science (SPSS).This study explains that green products awareness as the crucial factor, which significantly affects their green purchase decision.

Yanto ramli and Dudi permana (2020)[6] involves in the implication of green marketing that influence the customer awareness towards their purchase decision. In this research 189 respondents were randomly taken from the customers in the fast food restaurants. The purpose of this analysis is to test the hypothesis and to examine the relationship between the research variables by using Partial Least Square (PLS) as the technical tool and Structural Equation Modelling (SEM) for structural analysis. This research concludes that customer behavior has the highest influence on green marketing compared to customer awareness.

Safari .M (2020)[7] focuses on investigating and extracting Green Marketing strategies for eco- Friendly packaging in the green products. One of the principles of business success is identifying and linking our internal and external customer satisfaction strategies. Therefore, in this research, marketing strategies in the supply chain are measured. The purpose of this research is to examine the alignment of marketing strategies in supply chain and organizational performance in the industrial group. To achieve these goals, the focus of this research is on identifying strategies that influence green packaging. Similarly, using the questionnaire, the opinions of pharmaceutical company experts were also evaluated and rated on the strategies of the company involved in the packaging of products. The results and methods presented can be applied to other companies as well.

Zafer Yilmaz (2020)[8] studies on green products consumption analysis towards awareness, interest level and sensitivity of consumers. Green purchasing can be defined as the process of purchasing goods, services and construction works with the same basic function, with less environmental impact between goods, services and construction works compared to their counterparts over the life cycle. For the purpose of measuring the sensitivity and averseness of consumers about green product consumption, survey is conducted, and 183 respondents were collected through random sampling. It is also concluded that education level and income status of participants makes differences on their preferences as it is stated in such a way that the higher education level the better understanding of and loyalty.

Kirti Jainani and Neelam Dhanwani (2020)[9] investigates in green products a myth or worth to Indian consumer perspective. A green product is a product that has been designed to have a minimal impact on the environment. This research study is based on Secondary data and existing literature available on various authentic sources such as Ebsco host, Research Gate, ProQuest, Scopus publications. This study suggests that Age, Income and Gender has no relation with the green purchase decision.

Doni Purnama Alamsyah (2020)[10] provides awareness of environmentally friendly products and its impact on green advertising. This research states that there was an impact of green awareness on improving customer purchasing intention on the environmentally friendly product. This research takes surveys on 120 respondents through questionnaires under the random sampling method. This research suggests that green marketing strategy consisting of green advertising, has the ability to change consumer behaviour toward green awareness. And it concludes with the review of correlation among green advertising, green brand image and customer green awareness on environment friendly

Erni Rusyani (2021)[11] examines the factors triggering consumers to purchase eco-sustainable products and the interrelationships between environmental knowledge, environmental concern, green attitude, and perceived behavior control among Indian consumers. The researcher is collecting data from 514 respondents using purposive and snowball sampling methods. The research results are improving our understanding of Indian consumer behavior and the purchase of eco-sustainable products.

Saeed Siyal (2021)[12] involves in factors Influencing green purchase intention towards Role of green brand knowledge. To achieve this goal, they use structural questionnaire from 396 respondents from various software like SPSS and AMOS. And they also select Partial Least Squares (PLS) and Structural Equation Modelling (SEM) as their technical tools..

Fazli Haq and Adil Adnan (2021)[13] influence the green marketing practice on consumer buying behavior of environmental awareness. This study analyzes the effect of green marketing practices on environmental awarness. For this research 400 individuals were selected at random to complete a survey and their responses were examine using a hierarchical regression technique to relate the different factors involve in it. This study concentrate more on the green-marketing and green-environement dimension.

Alamsyah D P and Febriani R (2021)[14] focuses on green customer behaviour and its impact of green brand awareness to green trust. This research finds the line with the previous study explains that consumer trust for environmentally friendly products can be influenced by green brand awareness of consumer. To achieve this goal, 100 consumers are identified by quantitative analysis and SPSS technique tools are used. The results show that green brand awareness affects green consumer trust. The research concludes with the people who are aware of green products and environmental benefits.

Anh Duong Nguyen (2021)[15] examines that Sustainable development is a common term that human beings typically use to envision ecological practices. Among 124 respondents, green promotion affects green buyer behavior to a lower degree than green price and green distribution, but to a higher degree than green product. This study reveals the connection between green marketing and customers' buying decisions. Additionally, it is being implemented to interpret consumers' purchase behavior in a specific market towards environmentally friendly products.

Bhavyashree Siddharth (2021)[16] investigates the study Green products or environmentally friendly products are gaining popularity across different categories of people and demographic factors. Out of 200 students, 132 valid responses are being received. The study finds that the level of awareness about Green Marketing among students of The Bhopal School of Social Sciences is high, with many consumers using green cosmetic products across various categories. Marketers should seize this opportunity to build their brand presence and reputation by offering green products. Consumers expect the government and organizations to take the initiative and employ green marketing practices to protect the environment.

Linu James (2021)[17] aims to examine consumers' knowledge and interest in eco-friendly goods. One of the key objectives of green marketing is that customers are willing to pay more for an eco-friendly option. The research conducts a survey for 114 participants using a well-structured and closed-ended questionnaire. In data are analyzed by the Percentage analysis, a chi-square test, and a Friedman test are examined. The study's findings, which look at current conditions and the variables that make green products more appealing to customers, are optimistic. This study investigates that how different types of customers are based on their knowledge of environmental issues and preferences for green products, might be differentiated.

Brinda.M and Murali.V (2022)[18] tries to study a consumer awareness and perception towards green marketing .An empirical study in Bangalore city. Green marketing is one of the strategies that can help to the companies selling their products and service achieve their primary goals of the business. This research studies to measure the relationship between consumer awareness and perception towards green marketing. To collect sample size of 107 consumers is collected from Bangalore. This research concluded with the green Marketing products of Indian Tobacco company in Bangalore city.

Shaji George.A and Hovan George.A.S (2022)[19] involves to the influence of green marketing on consumer behaviour in Tamilnadu. This research studies of the product as well as service must be developed. To collect the data distributed 100 questionnaires to various institutions, members of SHG and individuals and around Tamilnadu. This research concluded with social media and newspaper of information regarding green products and practices has a positive attitude and consumers for their newspaper

Qi Zhang and Qiuhong Zhao (2022)[20] studies on the introduction of green product to a market with environmentally conscious consumers. they value green product1 higher than brown product for green product The deteriorating environment has made consumers pay more attention to the environmental attributes of product and environmentally conscious consumers are willing to pay more for green product.

Hashim Zameer and Humaira Yasmeen (2022)[21] involves to study Green innovation and environmental awareness driven green purchase intentions. role of environmental awareness, environmental concerns, and green innovation toward green purchase intentions. To collect the data the study developed several hypotheses. The results from the study indicated that environmental awareness significantly reinforce green purchase intentions.

Hassan Mahmoud and Yaris Rasool (2022)[22] shows the relationship between the multidimensional green marketing approach to enhance the purchase intention of green products. This research examines the impact of green marketing and its factors on purchase intention through green brand trust and image. This study explores the influence and effect of green marketing on customers' buying behaviour by establishing essential proxies and linking consumer buying habits and green marketing tools For the research data analysis 400 respondents are select by random sampling method. This study suggests that green approaches can be used as a brand marketing strategy to enhance customer purchase intention.

Syed Abdul Rehman Khan (2022)[23] investigates to improving the consumer-based green brand equity and its role of healthy green practices, green brand attachment and green Skepticism. This study includes 454 respondents for the questionnaire under the random sampling method. This study discusses the significant direct relationship between green practices and green brand equity. And it also suggest that the green products better for both consumer and environment has made consumers pay more attention to the environmental attributes of product and environmentally conscious consumers are willing to pay more for green product.

Dwinita Laksmidewi (2022)[24] involves to study Does The Consumers Materialism Affect Their Green Behavior? Journal of The Community Development in Asia 5 (1), 21-22. The millennial generation is creative, innovative, and cares about sustainability. The main finding of this research is that moderate-level materialism of millennial consumers increases the value of environmental care and encourages their desire to buy environmentally. This finding suggests that using green products might help consumers express themselves as knowledgeable people and signify their success.

Andreea Barbu and Alexandra Ioanid (2022)[25] tries to study Factors Influencing Consumer Behavior toward Green Products. To achieve the goal of this paper, divides the results of their analysis in to three sections. The first section presents the methodology used in the reviewed and other significant information about the analyzes articles. This concludes the paper provides valuable new insights into the expansion of the scientific literature on consumer perceptions on green products.

Balween Kaur and Ganesh Dash (2022)[26] provides the study Green Marketing Strategies, Environmental Attitude, and Green Buying Intention. A structured questionnaire was formulates with 400 respondents and all 21 variables section. On the future scope of related to the 4Ps can receive more and various measurements, such as the 7Ps. This study concludes with, in green promotion buyers will pay more to maintain a cleaner and greener climate.

Akram M Alhamad, Zainab Muayad Jaafar (2023)[27] analyses the influence of consumer environmental responsibility on green consumption intention. The 785 respondents are collects by the questionnaire method., and PLS-SEM was applied to perform the analysis. The research suggests that attitude, subjective norms, perceived behavior control, green thinking, and social media marketing have a strong and positive association with the intention to purchase green products on social media.

Elisabete Correia (2023)[28] investigates the impact of consumers' attention to green marketing on their green purchase behavior. Green marketing is crucial for changing consumers' environmental behavior. Our findings show that a positive correlation exists between consumers' attention to companies' green marketing communication and their green purchase behavior. We are currently conducting an online survey among residents aged eighteen and older, with 704 responses collected so far, and analyzing the data using a simple regression model.

Sabitha K V (2023)[29] examines that the depletion of natural resources is a primary reason why consumers are switching to environmentally responsible consumption. According to the report, Indian manufacturers must pay more attention to green marketing. Companies can educate the general public about the importance of sustainable practices and inform them about the environmental benefits of their products. A sample of 250 respondents is chosen using a practical sampling technique.

Vilkaite Vaitone (2023)[30] provides marketers with evidence-based best practices in green marketing to drive customer behavior effectively. Our ongoing review of 166 research articles confirms a consistent link between green marketing and intentions to adopt eco-friendly behaviors. We are identifying specific green marketing factors that impact customer behavior measures at various levels. Green marketing solutions are enhancing key indicators of customer behavior, such as engagement, loyalty, and advocacy. Our analysis reveals that tactical-level green marketing efforts are currently influencing customer behavior measures during the purchase and post-purchase stages.

Asim Mehmood and Amiya Bhaumik (2023)[31] provides the study on Consumer Buying Behaviour (CBB) in Pakistani hypermarkets reveals that green pricing and green promotion influence purchasing decisions by providing environmentally friendly products at competitive prices. This research aids businesses and policymakers in better understanding environmentally sustainable consumption patterns in general. The study includes 185 buyers, aged 21 to 50, from three hypermarkets. The study effectively demonstrates the persuasive power of various green marketing techniques in influencing consumers to opt for environmentally friendly products and services. This is inferred from the positive and significant correlation between green marketing practices, including green promotion and green pricing, and consumer buying behaviors.

Maninder Singh Gill, Kismat Kaur (2023)[32] studies consumer perception and preferences towards green marketing. For the data collection,370 respondents are selected by the descriptive questionnaire designs. This study suggests the need of designing marketing communication campaigns selling green merchandise because of high green value among the customers. This study brings green marketing and its impact on consumers' awareness and buying behaviour. It is concluded that respondents are aware of green marketing and several factors play the main role to use green marketing practices.

Sahyaja and Bernard Ose (2023)[33] tries the study on Consumers perception on green marketing towards eco-friendly fast moving consumer goods. This study investigates how consumers' awareness on environmental issues that influences their preferences when shopping for eco-friendly goods. The data are gather by the structural questionnaire with the response of 720 consumers. The goals of this research are to better understand the specific factors that drive consumers to purchase organic foods, green electronics, and eco vehicles.

Noor Azlinna Azizan and Fariza Hashim (2023)[34] involves in understanding consumer environmental ethics and the willingness to use green products.The utilisation of green products and consumption has helped minimise environmental and health threats, which is considered to sustain the environment. This study examines consumer environmental ethics, environmental attitude, social influence, moral obligation as independent variables, willingness to use green products as a mediator. This research conducts a questionnaire for the 300 respondents using convenience sampling techniques. The study utilized Partial Least Squares and Structural Equation Modelling (PLS-SEM) to examine the nine developed hypotheses that were model reflective using SmartPLS3.

Megawati Simanjuntak and Nidya Luthfi Nafila (2023)[35] studies on Environmental care attitudes and intention to purchase green products and its impact of environmental knowledge, word of mouth, and green marketing. The questionnaire are distributes to 160 respondents and examines with structural equation modeling. The research results with the need for effective green marketing strategies and increased environmental education to foster sustainable consumer behaviors.

Pratik Pravin (2024)[36] examines the companies recognize the need to address ecological issues and generate sustained customer interest in green marketing practices. For this research, a convenience sample of 118 participants who use green products is selected. The research findings reveal that consumers are highly concerned about environmental protection and have a favorable attitude towards green products.

Yasser Moustafa Shehawy (2024)[37] provides the study on the role of green awareness as a moderator of the relationship between green attitudes and purchase intentions. This study examines the determinants that impact customers' choices to buy environmentally friendly products. The data are collecting by hypotheses from 780 respondents. This research suggests the various ways that is organization's promotional campaigns, pricing strategies, product offerings, and distribution methods can influence environmentally conscious consumership.

Preksha Parekh and Preeti Satwani (2024)[38] focuses on the study on consumer perception and preferences in India. As growing consumer knowledge of various environmental concerns has forced them to make eco-friendly decisions. This study examines the consumer purchasing behaviour on green products. The survey is conducts with 400 respondents by the questionnaires method and the research uses a simple regression model using r studio. The research concludes with Indian consumers are having favourable opinion on purchasing green products.

Seemab Rana and Fazilathunissa Shafi (2024)[39] examines Online environmental platforms service and green consumer behavior nexus. This study aims to examine the effect of online environmental platforms service on green purchase behaviors of customers who intend to buy green energy products. The questionnaire are formed and data collects from 300 respondents. The study concludes with the online environmental platforms services can enhance sales and can be an effective strategy for high profits.

Akram Mohamad Alhamad, and Essia Ries Ahmed (2024)[40] provides the study on Green marketing and attitude affect the consumer buying behavior of green product in turkey. This study investigates consumer buying behavior regarding green products in Turkey. This study focusing on the impact of green marketing and consumer attitudes through the lens of the theory of planned behavior. By using questionnaire the data are collects from 385 respondents. The research results analyzes using SPSS 26. The study suggests both green marketing initiatives and positive consumer attitudes significantly influence purchasing behavior and it is highlights the strong correlation between favorable perceptions of sustainability and the likelihood of purchase.

CHAPTER-III

CONCEPTUAL BACKGROUND AND PROFILE OF THE STUDY

3.1 INTRODUCTION

Green products are those items considered eco-friendly. This means that the manufacturer of the particular product took the proper steps in ensuring that the environment was not harmed during its manufacturing process. The raw materials used in the product were derived from sustainable sources. And the production should have a low impact on the environment regarding waste, carbon emissions and energy use. Competition is one of the major challenges that a business man wants to face in a modern world. Every industry is composed of many individual firms and each individual firm is providing similar goods and services. Naturally this situation makes a big chance for competition among this firms.so in order to becoming the market leaders every business wants to adopt different strategies. Nowadays one of the major strategies adopted by companies to capture market is the marketing of green products or eco-friendly products. A green product provides a lot of advantages to us. Green products can be recycled, reused and is biodegradable in nature

Today people giving more attention to protection of environment, as they are aware about the appearance of hole in the ozone layer, destruction of forest etc. Because of these factors green products get more attention in today's world. The term 'green' has nothing to do with colour, but the choice of name is appropriate because green is a colour that is often associated with nature. Competition is one of the major challenges that a business man wants to face in a modern world. Green products are considered kinder to the environment than non-green goods, in one way or another.

A product is considered earth-friendly if it is biodegradable, meaning that it will pose no threat to the earth and environment when it is released to the air, water or earth while in use or when disposed of. These types of products usually decompose much quicker in a landfill, than similar items that are not biodegradable. Biodegradable household cleaners, soaps, dish and dishwasher detergents and laundry soaps are just a few examples of this type of green product. If a product contains any amount of recycled goods in its construction, it is also considered green for two reasons. Green products are grown without the use of toxic chemicals and within hygienic conditions. That's because recycling reuses a material keeping it out of the landfill, as well as saves on the environment when alternative materials are not manufactured and used for that component.

A product where packaging has been considerably reduced compared to other similar products requiring less shipping room and in turn reducing carbon emissions during transport to market, might also be considered green. When a product's manufacturing process is designed specifically to save energy, reduce carbon emissions or use renewable energy to make that item, it can also give it a green label. In this case, the product really should also be earth friendly, but this is not always the case. Great strides have been made to manufacture green products in such a way as to reduce the manufacturing process and resulting impact on the earth, as well as making them earth-friendly when it comes to usage and disposal.

Many countries, states and provinces also have green initiatives in place that encourage companies to look for ways to manufacture products in an earth-friendly manner. Every effort, even those that may appear minor to us, help to reduce the impact consumer goods have on our environment. Manufacturers are well aware of the demand for green products and want to draw customer's attention to their wares, which they usually consider to be the best green products.

3.2 GREEN PRODUCTS

MEANING

The economic, social, or psychological satisfaction capacity of a product lies in its utilities. Hence, a product can be anything; a tangible or intangible item that has the potential to satisfy the needs of consumers in the market. So, the marketers of each product focus on adding value to their product. In today's competitive environment, if marketers fail to do so, they risk losing the business as well as the opportunity to ensure customer satisfaction. Green products are considered kinder to the environment than non-green goods, in one way or another. Constant market research and development of new products or product modifications.

So, it is our collective responsibility to ensure the optimized and sustainable use of resources in the production as well as in the marketing aspects of various products, which will ensure the promotion of green products and their market in the modern economy. Any product that has fewer environmental impacts as compared to any other product with a similar function or application is considered a "green product."

Some of the characteristics of a green product are:

- Grown without the use of toxic chemicals and within hygienic conditions
- Can be recycled, reused and is biodegradable in nature
- Comes with eco-friendly packing
- Uses the least resources
- Is eco-efficient
- Has reduced or zero carbon footprint
- Has reduced or zero plastic footprint

3.3 BENEFITS OF USING GREEN PRODUCTS

- **It can help you save money**

  While at face value, the products that are considered "eco- friendly" may be more expensive in comparison to the name brand products we are used to, they can actually be money-saving in the long run.

- **They provide you with a healthier lifestyle**

  Not only are these products healthier for the environment, but they can also be healthier for you! A lot of products contain harmful chemicals that put us at the risk of developing illnesses and diseases. Eco-friendly products eliminate all of these risks by using natural products and avoiding additives we are unaware of.

- **Eco-friendly products use biodegradable packaging**

  Plastics are the go-to item used in most packaging, which are extremely damaging to the environment. Eco-friendly manufacturers make products using packaging from recycled materials that can easily decompose.

- **Using these products will not conflict with any personal morals**

  Not only are these products healthy for the environment in terms of being biodegradable, they also do not test their products on animals or use any animal by-products in production. All of the negative aspects that often. come with poor manufacturing of larger corporations is completely eliminated.

- **It Supports for Sustainable Practices:**

  When you purchase green products, you are often supporting companies that prioritize environmentally friendly manufacturing processes. This can help promote a market that values sustainability and encourages more companies to adopt similar practices.

BIO-BASED PRODUCTS

3.4 ADVANTAGES OF GREEN PRODUCTS

1) To The Customers

a. Cost-effective products

Green products last longer than conventional products. Moreover, these products consume less energy and other resources thus reducing the bills of the users. For example, solar speakers can last for 10 hours just by charging with solar energy.

b. Low Maintenance

If operated responsibly and maintained properly, the green products result in low maintenance costs. Take green buildings, for example.

c. Improves Health

Since eco-friendly products are made from materials that are free from harmful chemicals and components, they not only improve physical but also mental health. In green buildings, large windows are installed which allows healthy and fresh air along with natural lighting in abundance. It improves mental health and reduces stress.

2. To The Society

a. Generate More Jobs

According to a study by IRENA (International Renewable Energy Agency), the renewable energy industry has created almost 5 lakh new jobs opportunity. Thus, with the development of green products not only the environmental but also the economic conditions are improving.

b. Prevents overuse of resources

Green products reduce the threat of overuse of resources and fossil fuels and encourages the generation of energy using natural resources.

c. Protects the environment

Green products are made from organic and biodegradable materials and are designed to use least non-renewable resources and toxic chemicals to produce energy. This reduces the generation of greenhouse gases like CFCs. Ozone, methane etc. and hence prevents pollution and deterioration of climatic.

3. To The Brands

a. Access to New markets

Developing green products opens the doors to an all-new market of green consumers who buy only green products and even pay more for the same.

b. Competitive Advantage

It's a proven fact that going green is a big competitive advantage in the market right now.

c. Positive Public Image

When a brand does something for the society and the environment, its brand image automatically enhances.

3.5 FACTORS INFLUENCING CUSTOMERS TO BUY A GREEN PRODUCTS

Factors that may influence consumer' willingness to pay more for environmentally friendly products have been identified. These factors can be classified into seven categories:

- Consumer's Environmental Knowledge
- Consumer's Value
- Consumer's Attitude
- Consumer's Behaviour
- Consumer's Age
- Consumer's Education
- Consumer's Income Level

1. Consumer's Environmental Knowledge

Consumer knowledge or "Eco literacy" is considered a significant construct that affects how consumer gather and organize information. How much information is used in decision making and how consumer evaluate products and services Customers claimed they wanted to buy ecologically compatible products, but British supermarkets were overstocked with products that the same Consumer's later explained were too expensive.

2. Consumer's Value

Value have been considered as the criterions that use to select and justify the individual action, to value object and the other's conducts. Environmental value plays a major role in pro environmental behaviour. Value affect people's beliefs, which then have influences on personal norms that lead to consumer' pro-environmental behaviours, individualism and collectivism concentrates on the degree to which people act as a group or as individuals, and long-term orientation to which people delay gratification of material, social and emotional needs. Collectivist people tend to be friendlier to the environment, while individualistic people tend to be more unfriendly.

3. Consumer's Attitude

Environmental attitude has been the most investigated factor to predict Green purchase in the past research. Based on the idea that attitude predict actual behaviour. Several studies found that environmental concerns positively correlate with the green purchase behaviour where people with strong environmental concerns are likely to behave environmentally responsible compared to those with less environmental concerns. Some research found attitude do not directly determine behaviour but they influence the intention to act which shapes actual behaviour.

4. Consumer's Behaviour

A person's behaviour will determine the aspect of their environmental to which they are exposed. And behaviour is, in turn modified by the environment. Therefore, much consumer and market research are based on the assumption that knowledge of the consumer attitude will help to predict the consumer behaviour. The increase in the environmental consciousness has had a profound effect on the consumer behaviour with the green products market expanding at a remarkable rate.

5. Consumer's Age

In general, the socially responsible consumers' demographic profile is young or pre-middle age. However the findings have been somewhat equivocal when some researchers have found non-significant relationships between age with environmental sensitivity while others identify the environmentally conscious consumer as being older than average, Researchers believe that consumers may be more 'mature' in terms of age, familial status and market experience will willing to purchase pro environmental products.

6. Consumer's Education

Studies show higher educated understand the issues involved and are more concerned about environmental quality and more motivated to participate in environmentally responsible behaviours. On the other hand, it could be considered as the longer the education, the more extensive is the knowledge about environmental issues.

7. Consumers Income Level

Consumers with medium or high incomes would be more likely to act in an ecologically compatible manner due to their higher levels of education and therefore to their increased sensitivity to social problems. They also the group of customers that afford to pay more on the pro-environmental products.

3.6 GREEN PRODUCTS CERTIFICATIONS

There are various certifications which will assist in making a green purchasing decision. This is to ensure consumers are not being deceived regarding green products. The certifications can be both national and international that will help in differentiating between what's original and fake.

Some of the certifications provided to green products are listed below

- **Energy Star**

The Energy Star certification is a program established by the U.S. Environmental Protection Agency (EPA) that identifies products, homes, and buildings that meet specific energy efficiency criteria. It aims to help consumers save money and reduce greenhouse gas emissions through more efficient energy use.

- **Green Seal**

An eco-label used by producers and service providers in order to pinpoint products and certain services like restaurants hotels etc. follows a sustainable standard.

- **Forest Stewardship Council**

The Forest Stewardship Council (FSC) is an international non-profit organization that promotes responsible forest management. A certification program for wood products that come forests that are managed in an environmentally responsible, socially beneficial and economically viable way.

- **Leadership in Energy and Environmental Design (LEED)**

LEED is a green building certification program that recognizes best-in-class building strategies and practices. It was developed by the U.S. Green Building Council (USGBC) and promotes sustainable building and development practices.

- **USDA Organic Product**

A labelling used to ensure that the food or agricultural products have been produced through approved methods.

- **Global Organic Textile Standard**

The aim of the Global Organic Textile Standard (GOTS) is to define requirements to ensure organic status of textiles, from harvesting of the raw materials, through environmentally and socially responsible manufacturing up to labelling in order to provide a credible assurance to the end consumer.

3.7 LIST OF GREEN PRODUCTS

1. Reusable water bottle
2. Bamboo toothbrush
3. Wooden utensils
4. Huskee cups
5. Jute bags

3.8 REUSABLE WATER BOTTLES

A reusable bottle is a bottle that can be reused, as in the case as by the original bottler or by end-use consumers. Reusable bottles have grown in popularity by consumers for both environmental and health safety reasons. Reusable bottles are one example of reusable packaging. reusable water bottle is an eco-friendly alternative to single-use plastic bottles, designed to reduce waste and promote sustainable hydration. By opting for a reusable bottle, individuals can save money, minimize environmental impact, and enjoy the convenience of staying hydrated on the go. Available in various materials and designs, these bottles are not only practical but also customizable to fit personal styles and needs.

3.9 BENEFITS OF REUSABLE WATER BOTTLES

Reusable water bottles are quickly becoming an everyday essential for many people, and for a good reason. Not only are reusable water bottles eco-friendly, but they also have numerous additional benefits, like helping you save money, keep drinks colder longer, and even health benefits.

- **Eco-Friendly**

  One of the main selling points for reusable water bottles is that they are eco-friendly. When compared to plastic water bottles, reusable bottles have a much lower environmental impact. Both the production and disposal of single-use plastic bottles contribute to pollution, greenhouse gas emissions, and plastic waste, all of which can be significantly reduced just by using a sustainable alternative. With reusable water bottles by your side, you become an environmental superhero, fighting the good fight against plastic pollution.

- **Save Money on Single-Use Bottles**

  Over time, reusable water bottles can save you a big chunk of change. The average cost of a bottle of water in the United States is about $1.45, which may not seem like a lot, but it can really add up over time. Just buying one bottle of water every day for a year adds up to over $500 spent on water alone. By investing in a reusable water bottle, all of that coin goes back into your pocket.

- **Keep Drinks Cold Longer**

  Many types of water bottles are made with insulating materials that maintain the temperature of the bottle's contents, so you can keep your cold drink by your side all day without worrying about it getting warm. For those of us with busy lifestyles, this is especially important, since you don't want to finish wrangling your children or leading a meeting only to return to a lukewarm bottle of water.

- **Durability**

Life can be rough, and so can your adventures. Unlike single-use plastic bottles, which can crunch and crack easily, reusable bottles are made pom sturdy materials that can withstand frequent use. Reusable bottles are typically made from durable materials such as stainless steel, glass, or heavy- duty plastics that are specially designed to hold up against every day wear and tear.

- **Portability**

Life is a whirlwind of activities, and your water bottle needs to keep up. Reusable water bottles are designed with portability in mind. With sleek cup holder-friendly designs, leak-proof caps, and ergonomic handles, they effortlessly fit into your backpack, clip to your gym bag, or slide in your bike cage cup holder, always ready to quench your thirst on the go. Stay hydrated without the hassle, because convenience is the name of the game.

- **Monitor Water Intake**

Reusable water bottles allow you to easily monitor and track your water intake, which is great for anyone trying to actively drink more water or stay hydrated throughout the day. By keeping an eye on the number of times you fill up your bottle, you can effortlessly track your water intake and figure out when it's time for a refill. helping you stay on top of your hydration game without any fuss.

- **Make a Statement**

Gone are the days when reusable water bottles were dull companions. Today, they come in a kaleidoscope of styles, colours, and patterns. From sleek stainless steel bottles to vibrant silicone, there's a reusable water bottle to match every personality and fashion statement. Plus, many water bottles offer personalization options, allowing you to customize your refillable bottle to be as unique as you are.

3.10 REASONS FOR CARRYING A REUSABLE WATER BOTTLES

Using a reusable bottle is a good idea, healthy, practical, cost-effective, and satisfying habit. In this article, we've compiled a list of our top seven reasons for carrying a reusable water bottle

- ✓ **Reduce the amount of water generated by single-use plastic bottles**

  In the United States alone, billions of single-use plastic water bottles are discarded each year. That's 35 billion dollars per year. These figures are staggering, and given than less than 10% of plastic thrown in bins in the last 40-50 years has been recycled, it's no surprise that plastic bottles are filling landfills and our oceans..

- ✓ **Reusable bottles are healthier**

  Single-use plastic bottles not only harm the environment, but they can also harm your health due to chemicals leaching into the water stored inside of these bottles. Disposable plastic bottles are typically made of PET (poly terephthalate) plastic, which has been shown to leach antimony into the water, increasing storage time and temperature. The release of Antimony trioxide from PET plastic water bottles is a significant source of exposure and is dangerous to human health.

- ✓ **Complete control over what goes into reusable bottle**

  Furthermore, despite advertising claims, there are no guarantees about where the water in any "brand name" of single-use water bottles comes from. This means that people are getting duped into paying exorbitant prices for water that they can get for free from their sink. You have the freedom to choose where your water comes from when you use a reusable bottle. We recommend using a good water filter or refilling your bottles at a nearby filtered water dispenser

✓ **Save money on water and drinks**

Another point is that using a reusable water bottle is significantly less expensive than purchasing single-use water bottles. Bottled water can quickly become costly, costing the average American around $200 per year. On average, a single reusable bottle costs $30-550 and will last you for years of use.

✓ **A single bottle will last for years**

If you're anything like us, you value sustainability, minimalism, and zero-waste goals. Because our possessions are fewer in number, we can more clearly identify what is important to us and take good care of them to ensure their longevity. A reusable bottle is more than a bottle; it is your constant companion. The more it is used, the more personality and character it develops, and it can be maintained for years.

✓ **Select the bottle that meets requirements**

This leads to why carrying a reusable bottle is beneficial: select the best bottle for your needs. Instead of mindlessly purchasing disposable water bottles and to-go paper coffee cups, take a moment to consider what you need daily, as well as your personal preferences. Some people, for example, prefer the taste of beverages served in a glass, including not only water but also coffee, juice, or smoothies.

3.11 TOP 3 REUSABLE WATER BOTTLES BRAND

Reusable water bottles are primarily used to transport liquid substances or water from one place to another. The food and beverage industry uses these bottles when selling liquid products (such as heath drinks, cold drinks, water, etc.).

✓ **Cello**

Cello a name that is common in the Indian households for the past 60+ years. Established in 1962 with the vision to be India's most preferred household brand with innovative & aesthetically superior products at affordable prices.

✓ **Milton**

Milton Industries Limited was originally incorporated on August 23, 1985 as Milton Laminates Private Limited.

✓ **Tupper ware**

Tupperware Brands Corporation is an American multinational multi-level marketing company established in 1946 .

✓ **Pigeon**

Pigeon was founded in 1957 in Japan by its founder Yuichi Nakata whose vision to provide quality, comfort, convenience and affordability in one brand has made pigeon the market leader today.

✓ **Signoraware**

Signoraware is determined to provide best products to the global market. With experience of over 3 decades, Signoraware has launched best quality water bottles at the most economical price by using best technology.

3.12 BAMBOO TOOTHBRUSH

A bamboo toothbrush has a long handle and bristles to remove food debris and plaque from your teeth. The critical difference is that the long handle is made from more sustainable bamboo instead of plastic. Bamboo toothbrushes are one of the oldest types of toothbrushes.

3.13 BENEFITS OF BAMBOO TOOTHBRUSH

Like a plastic toothbrush, ones made from bamboo can also help you stay on top of your oral health. In fact, there are many benefits in switching to a bamboo toothbrush.

- **Eco-friendly alternative**

  Bamboo toothbrushes are an eco-friendly alternative to a plastic toothbrush. They are fully biodegradable and can be used for other creative things around your house once you have finished using it. However, you should remove the nylon bristles beforehand and place the bristles into your plastic recycle bin before getting creative.

- **Cleans your teeth**

With soft, nylon bristles, our bamboo toothbrushes can still provide you with the oral care your teeth need. Just like a plastic toothbrush, it will still provide you with the same benefits but is an eco-friendlier option. From a dentist's perspective, we recommend you continue to bush your teeth twice a day and floss once a day to maintain good oral hygiene.

- **Sustainable**

Bamboo is one of the fastest growing plants so the supply of a bamboo toothbrush may be an efficient process. It is also renewable and sustainable which means there will be less pollution in the air when creating the brush. In addition, because the bamboo can be replanted, the bamboo may never run out. Furthermore, if you choose to dispose of your toothbrush it may take 4 to 6 months to break down within a compost bin depending on what you put in it. . You could also

- Use it as fuel for your fireplace
- Dispose of it at your local commercial composter
- Place it in your garden or a pot plant
- Reduce plastic waste

3.14 REASONS FOR USING A BAMBOO TOOTHBRUSH

- **Reduce Plastic Waste**

Plastic can take anywhere from 20 to 1,000 years to break down, and has been accumulating in our oceans at an alarming rate over the last few decades. Made from 100% natural bamboo wood and recyclable nylon bristles, these brushes will eventually degrade after several months in landfills, and you can quickly put them into your compost bin after you're done or simply recycle them.

➢ Keeping Your Teeth Healthy

Another benefit of using a bamboo toothbrush is that it is naturally antimicrobial, antibacterial, and antifungal, meaning it does not support the growth of bacteria. Another popular reason why so many shoppers are looking to buy bamboo toothbrush is that it contains fewer chemicals. Properties inside bamboo kill bacteria that penetrate its surface, preventing bacteria from passing through, and its safe to use for both kids and adults. Just as effective as a plastic toothbrush or an electric toothbrush, the bamboo toothbrush comes with a bamboo handle and nylon fibres that give you pleasant feelings against the teeth but are also firm enough to sweep away bacteria and plaque around each tooth.

➢ Update Your Eco-Friendly Style

Not only the materials used to make bamboo toothbrushes can easily be recycled or decomposed without causing any harm to the environment, but bamboo brushes come in sleek designs and natural tones, adding a touch of elegance to your bathroom routine. You can select your own toothbrush from a mix of five different colour options. There are white, pink, green, black, and grey.

➢ Comfortable To Use

The performance and quality of Ecopify bamboo toothbrushes are always outstanding, and Ecopify is known to have quality bamboo toothbrushes that will last for many months. Each bamboo toothbrush is made using natural bamboo wood that is carefully designed to provide a comfortable and firm grip when brushing. On top of all that, each toothbrush is individually packaged in its own 100% recyclable cardboard box. Plastic bottles are produced in a highly polluting manner, and they biodegrade extremely slowly.

➢ Good for Your Overall Health

Another popular reason why so many shoppers are looking to buy bamboo toothbrush is that it contains fewer chemicals. Which is true, natural products like bamboo help you avoid exposure to large amounts of chemicals such as BPA, a chemical linked to many health concerns.

➢ Very Affordable

The next reason why you should buy a bamboo toothbrush is that they are affordable. Bamboo toothbrushes come in all shapes and sizes, but their price range is not as diverse. The price of Ecopify Bamboo Toothbrush may seem high to some consumers, but other consumers would disagree, and so would ecopify. We provide high-quality bamboo toothbrushes that are made to withstand and outlast the conditions they are made for and are also comfortable and attractive.

➢ Create a greener future

You can do your part in creating a greener future by choosing bamboo toothbrushes. Every day, millions of plastic toothbrushes are being discarded in our landfills, which has adverse effects on the environment. Bamboo toothbrushes are made to help reduce plastic waste output and promote a cleaner, healthier environment.

3.15 TOP 5 BAMBOO TOOTH BRUSH BRAND IN INDIA

Bamboo toothbrushes are exactly what they sound like. They are toothbrushes that have handles that are made out of an all-natural, biodegradable material known as bamboo and bristles that BPA free and are made out of nylon or nylon4.

- **The Bamboo Bae**

It was started by two travellers who wanted to create a plastic-free environment for the love of nature. They are situated in Ghaziabad, Uttar Pradesh, and provide a wide range of everyday necessities that aid in sustainable living and travel.

- **Madake**

Madake, based in Manipur, Chennai, was created in 2019 to create unique and functional bamboo goods for everyday usage. Its mission is to provide high-quality, long-lasting alternatives to everyday staples..

- **Codesustain**

Codesustain is another one of the leading bamboo manufactures in India. It collaborates with craftsmen, small-scale manufacturers, and nongovernmental organisations.

➢ Bamboodu

Bamboo Products are all biodegradable, sustainable, environmentally friendly, and recyclable. Bamboodu provides the most environmentally friendly products as per the requirement. heir offerings often include features like soft, charcoal-infused bristles for better cleaning and a stylish design.

➢ Brown Living

From design to material quality, production to consumption and reuse, Brown Living takes a circular design approach to every bamboo products. Bamboo goods have no negative effects on our health or the environment and they make sure to provide the highest quality products.

3.16 WOODEN UTENSILS

Wooden utensils refer to kitchen tools and implements that are made primarily from wood. These utensils are commonly used in cooking and food preparation. Examples of wooden utensils include spoons, rolling pins, cutting boards, and salad servers.

3.17 BRIEF HISTORY AND MODERN-DAY USE OF WOODEN UTENSILS

Wooden utensils, with their rustic charm and functional design, have been an integral part of human culinary history.

❖ Ancient Beginnings

The use of wooden tools for culinary purposes can be traced back to ancient times. For instance, chopsticks, originating in ancient China, were primarily used as eating utensils. Their design made them ideal for picking up food, and only later did they find use in cooking. In the Western world, the term "cochlea," from which the ancient words for spoons in Greek and Latin are derived, could refer to the shape of a spoon, reminiscent of a snail shell. Their origins trace back to ancient civilizations, showcasing the timeless appeal and utility of wood in daily life.

❖ Transition to Metals

With the advancement of metallurgy, there was a notable shift in the materials used for kitchen utensils in certain regions. Around 3600 BCE, during the Bronze Age, the bronze and copper. However, wooden utensils remained a staple in many culares, especially in parts of Asia, where their use never wanted. Modern utensils are cherished for their non-stick properties and their ability to with stand high temperatures, making them a preferred choice for many culinary tasks.

❖ Modern-Day Usage

Wooden utensils have continued to be a staple in many cultures. especially in Asia. In recent years, with growing environmental concerns and a shift towards sustainable living, wooden utensils have also seen a resurgence in popularity in Western countries, including the United States and Australia some households in the Middle East and Mediterranean regions began transitioning from wood to metal implements

3.18 TOP 5 WOODEN UTENSILS BRANDS IN INDIA

A wooden spoon is a utensil commonly used in food preparation. It is typically a large spoon made from wood. In addition to its culinary uses, wooden spoons also features in folk art and culture. They are heat-resistant and can be used to cook on the stovetop without fear of melting or warping. They won't burn your hand if left in a boiling pot like most metal and plastic utensils.

❖ Bamboo India

Bamboo India is a Pune-based startup founded in 2016 by Ashwini and Yogesh Shinde. The company aims to reduce plastic waste by offering eco-friendly bamboo-based alternatives to everyday products. Bamboo India often highlights the health benefits of using bamboo, as it is naturally antibacterial and does not leach harmful chemicals into food.

❖ Exclusive Lane

3.19 HUSKEE CUPS

The term "Huskee Cup" generally refers to a brand of reusable coffee cups known for their sustainable design and use of innovative materials. The key feature of Huskee Cups is that they are made from coffee husk, which is the outer layer of the coffee cherry that is usually discarded as waste during the coffee milling process. Instead of letting this by-product go to waste

3.20 BENEFITS OF HUSKEE CUPS

✓ Keep your coffee hotter for longer

Huskee cups unique thermal properties will keep your coffee hotter for longer. So whether you are at home, on the go, or dining in at a café, you can expect an improved coffee experience.

✓ Comfortable to Hold

Huskee Cup has a slim and grip-able form. And its fins are not an iconic design feature - they also protect your hands from the heat of your drink. You're going to love the way that it feels to hold huskee cup (whether with one hand or both)

✓ Durable and dishwasher friendly

Huskee cup is designed to last for years (even in a cafe It's durable and it doesn't chip or crack easily. We have tested environment) it in even the most rigorous café environments, running it through the dishwasher dozens of times a day.

✓ Non-toxic (BPA free)

Huskee Cup is produced using materials which have all been tested as food safe. We work closely with our husk suppliers to ensure that no hazardous materials or chemicals are used during the process to obtain the husks. The Huskee Cup is BPA free, and an approved food safe sustainable coffee cup.

✓ Aesthetically Pleasing

Beyond function, Huskee Cup is recognized globally as an aesthetically pleasing, beautifully designed vessel. Additionally, Huskee Cup's sustainable Universal Lid & Saucer are the perfect complement to its elegant and sophisticated aesthetic.

3.21 FACTORS INFLUENCING HUSKEE CUPS

- **Sustainability**

One of the primary factors is sustainability. Huskee Cups are made hom coffee husk, an organic waste material generated in the coffee duction process. Using coffee husk to create the cups reduces the environmental disposable cups. impact and provides a sustainable alternative to traditional

- **Material Innovation**

The use of coffee husk as a material is innovative and unique. It not only repurposes a waste product but also gives the cups a distinctive appearance and texture. The material is also durable and has insulating properties.

- **Durability**

Huskee Cups are designed to be durable and long-lasting, making them a practical choice for consumers who want a reusable cup that can withstand daily use. The cups are resistant to chips, cracks, and odours, ensuring a reliable and sturdy option for coffee drinkers.

- **Versatilite**

Huskee Cups come in various sizes and styles, catering to different preferences and serving needs. This versatility makes them suitable for both home use and in commercial settings like coffee shops

- **Heat Retention**

The insulating properties of the coffee husk material contribute to heat retention, keeping beverages warmer for longer periods.

3.22 TOP 5 HUSKEE CUPS BRANDS IN INDIA

Huskee Cup features coffee husk as a raw material. The coffee husk is an organic waste material that's produced at the milling stage of coffee production. Reusable cup for the home, cafe, or takeaway that repurposes waste coffee husk, a by-product from the production of coffee.

- **PackTech**

PackTech companies are involved in designing, manufacturing, and supplying packaging materials and technologies.

- **EcoCups**

Eco cups Specializes in eco-friendly and biodegradable cup solutions.

- **Biopak**

It combines innovative material design with a responsible business model to create a truly regenerative brand, one that creates products that are as safe and healthy for people as they are for the environment.

Bambrew

Bambrew is a cleantech startup that makes eco-friendly packaging alternatives to single-use plastics. Bambrew's products are made from bamboo, sugarcane, and seaweed, and are biodegradable, lightweight, durable, and chemical-free.

The Happy Turtle

The Happy Turtle is an Indian brand focused on sustainability and zero-waste living. While they may not specifically label their products as "Huskee cups,"

3.23 JUTE BAGS

Jute bags refer to bags made from jute, a natural fibre derived from the stem of the jute plant. Jute is a long, soft, shiny vegetable fibre that can be spun into coarse, strong threads.

3.24 BENEFITS OF JUTE BAGS

- **Eco-Friendly**

  One of the most significant benefits of jute bags is that they are environmentally friendly. Jute is a natural fibre that is biodegradable, which means that it breaks down quickly and does not contribute to pollution. By using Jute Shopping Bags as a promotional tool, you can show your stability.

- **Durable and Long-Lasting**

  Another benefit of customized jute bags is that they are durable and long-lasting. Jute fibres are strong and can withstand heavy loads, making them an excellent choice for carrying groceries, books, and other items. This means that your customers will be able to use your customized jute bags for a long time, which can help promote your brand and increase brand recognition.

- **Customizable**

  Jute tote bags are highly customizable, which means that you can create a unique design that reflects your brand. You can choose the colour, size, and shape of your bags, as well as add your logo or other branding elements. This makes jute bags an excellent choice for promoting your brand at events or trade shows. By creating a customized design for your jute bags, you can create a memorable and eye-catching promotional item that will help you stand out from the crowd. This can increase the likelihood that people will remember your brand and become loyal customers.

- **Cost-Effective**

  Customized jute bags are also cost-effective, especially when compared to other promotional items such as t-shirts or hats. Jute bags are relatively inexpensive to produce, and because they are durable, they offer excellent value for money. Additionally, because jute bags can be reused multiple times, they can help you save money on other promotional items such as plastic bags or paper bags. This can help you build a positive reputation and attract environmentally conscious customers

3.25 REASONS JUTE BAGS ARE IN TREND

- **Big objects are eye-catching**

According to human psychology, our attention often shifts to big, attractive, colourful objects among others. These jute bags have allthese attractive features. No one can ignore their elegant and chic look. As these jute handbags are available in different sizes and shapes, you can get your desired bags according to your needs or purpose. The bright natural and free dyes make these bags more attractive and enhance their stunning Jacek With a bunch of stunning prints, these bags are a perfect look stealer.

- **Fashionable trend**

Today's era is all about fashion! People set their individual goals by idealizing others, their style, and choices. Celebrities are adopting natural product usage so people are also considering this as a great option. There are some jute handbags like designer jute bags that are crafted especially to match our style statement. As these bags have some curated fresh and trendy designs, you can get enough potential clients who would love these bags. Jute is a natural fibre that is biodegradable, which means that it breaks down quickly and does not contribute to pollution. By using Jute Shopping Bags as a promotional tool, you can show your stability.

- **Suitable gifting option**

Jute bags these days have been a great marketing platform. Due to its extensive use, many jute vendors, business enterprises, store owners, etc. are selecting these bags as the best giveaway option. Being a useful product, the demand for such great handbags is never out of fashion. These jute bags are specially designed to fit your requirement when you want to gift someone on any occasion. These beautiful handbags can be given as a token of memory

➢ Low Maintenance

Jute fabric has the highest quality among all other plant products. As jute has impeccable qualities of high ductility and less extensibility, these golden fibers can be easily molded into bags. These giftjute bags need very low maintenance as compared to plastic bags. These bags can be used regularly for more than 12 months.

➢ Affordable and Economical

Jute bags are a perfect combination of qualities and look that a trendy bag should have. Unlike other bags, jute handbags are way economical. You can use these bags for your sales promotion at is a very cheaper price. So investing in these bags can be taken as the most affordable decision.

➢ Pollution-Free Environment

As we discussed earlier how plastic bags have been created havoc for years. Jute bags are the ultimate solution when comes to eco-friendly usage. This would simplify the most asked question of jute bags vs. plastic bags. After harvesting, the left-out plant parts like its stems and leaves provide high nutritious content to the soil.

3.26 TOP 5 JUTE BAG BRAND IN INDIA

Jute material is a natural vegetable fibre which is made from the outer stem and skin of a jute plant. Jute is an incredibly versatile material which also makes up hessian cloth, however, it is most commonly used now for making durable items such as eco-friendly jute bags**.**

- **Eco right**

Eco Right is known for its wide range of eco-friendly and sustainable jute bags, including shopping bags, tote bags, and pouches. Data interpretation is the study of scientific measurements and observations to develop evidence for responding to a query. The common tools used for data interpretation are electronic spreadsheets which are capable of sorting, graphing and searching data.

Simple percentage analysis

It is refers to a special kind of rates, percentage or used in making comparison between two or more series of data.

$$\text{Percentage of the respondents} = \frac{\text{Number of respondents}}{\text{Total respondents}} \times 100$$

TABLE NO: 4.1

GENDER WISE CLASSIFICATION OF THE RESPONDENTS

Gender	Number of Respondents	Percentage
Male	50	50
Female	50	50
Total	**100**	**100**

(Source: Primary Data)

INTERPRETATION

The above table number 4.1 represents the gender wise classification of the respondents. It is observed from the table 4.1 that 50% of the respondents are male and 50% of the respondents are female.

CHART NO: 4.1

GENDER

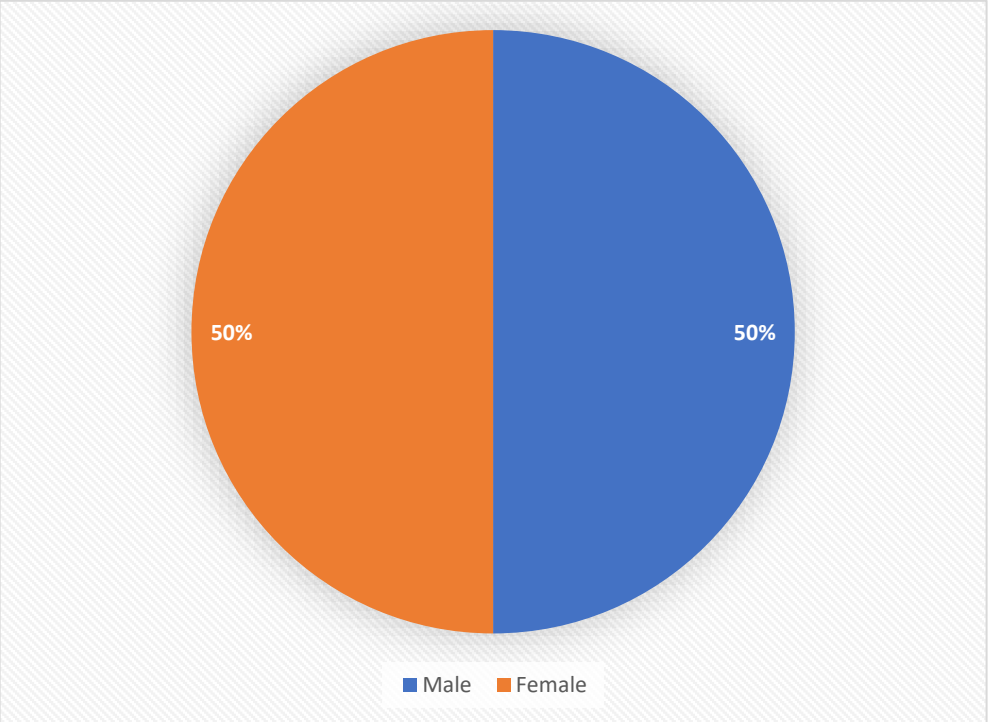

TABLE NO: 4.2

AGE WISE CLASSIFICATION OF THE RESPONDENTS

Age	Number of Respondents	Percentage
Below 20 years	52	52
21-30 years	29	29
31-40 years	12	12
Above 40 years	7	7
Total	**100**	**100**

(Source: Primary Data)

INTERPRETATION

The above table 4.2 represents age wise classification of the respondents. It is observed that 52% of the respondents age is below 20 years, 29% of the respondents is 21-30 years, 12% of the respondents age is 31-40 years, 7% of the respondents age is above 40 years.

CHART NO: 4.2

AGE

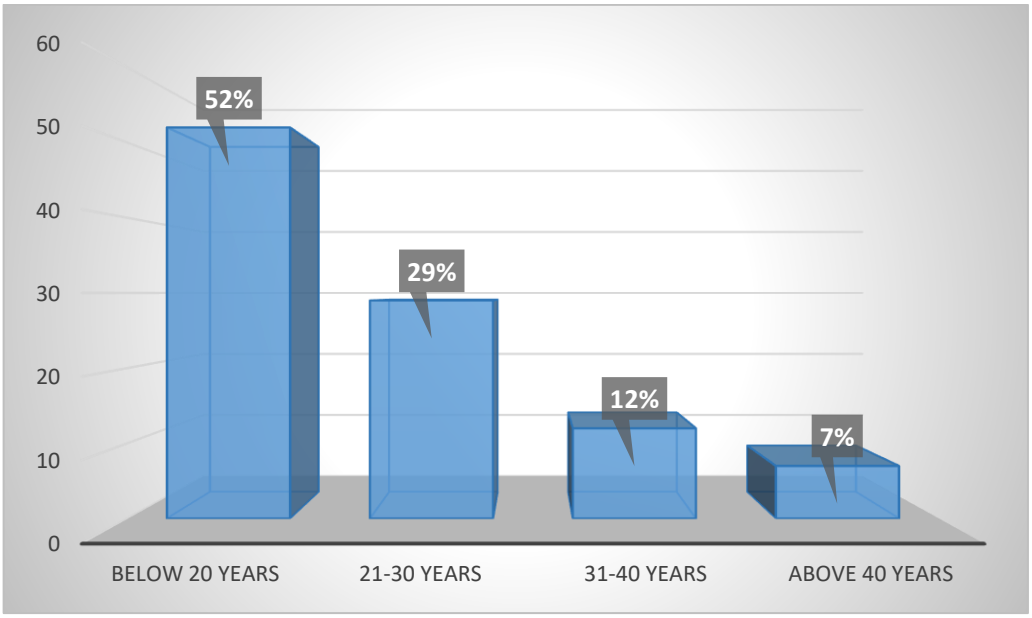

TABLE NO: 4.3

EDUCATIONAL QUALIFICATION OF THE RESPONDENTS

Particulars	Number of Respondents	Percentage
School	12	12
Undergraduate	50	50
Postgraduate	25	25
Diploma	4	4
Professional course	9	9
Total	**100**	**100**

(Source: Primary Data)

INTERPRETATION

The above 4.3 represents educational qualification of the respondents. It is observed that 50% of the respondents are undergraduate candidates, 50% of the respondents are postgraduate candidates, 12% of the respondents are school candidates, 9% are school candidates and 4% are diploma candidates.

CHART NO: 4.3

EDUCATIONAL QUALIFICATION

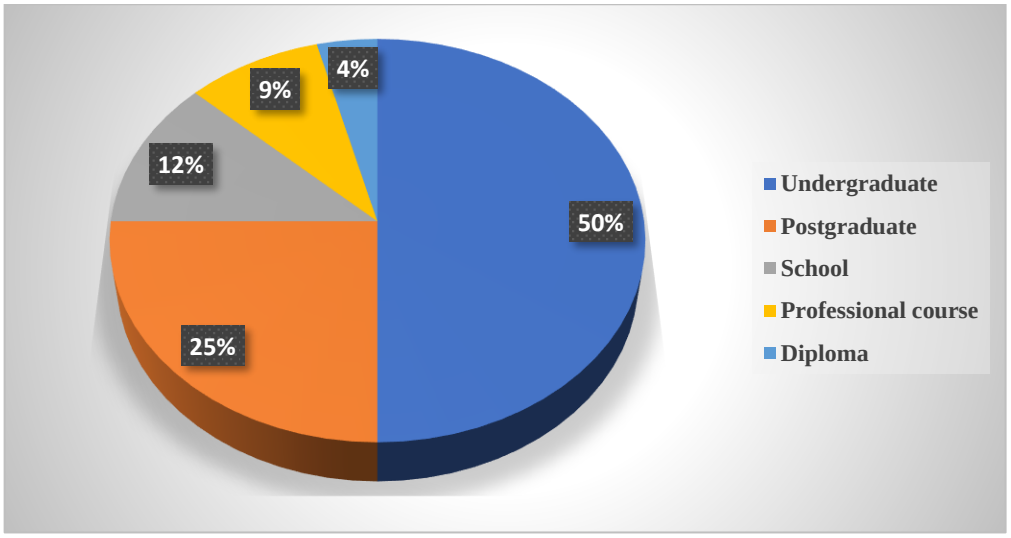

TABLE NO: 4.4

MARITAL STATUS OF THE RESPONDENTS

Particulars	Number of Respondents	percentages
Married	38	38
Unmarried	62	62
Total	**100**	**100**

(Source: Primary Data)

INTERPRETATION

The above table 4.4 represents marital status of the respondents. It is observed that 38% of the respondents are married and 62% of the respondents are unmarried.

CHART NO: 4.4

MARITAL STATUS

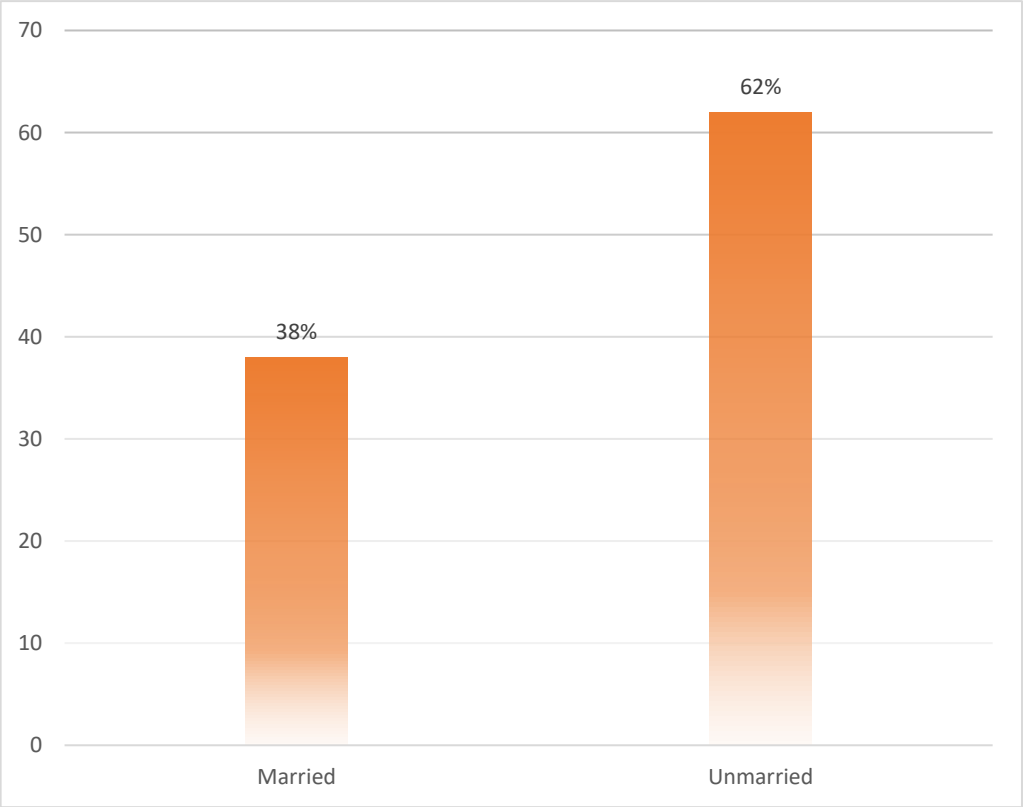

TABLE NO: 4.5

OCCUPATION OF THE RESPONDENTS

Particulars	Number of respondents	percentage
Self employed	14	14
Salaried	15	15
Professionals	12	12
Homemaker	9	9
Students	50	50
Total	**100**	**100**

(Source: Primary Data)

INTERPRETATION

The above table 4.4 represents the occupation of the respondents. It is observed that 14% of the respondents are self employed, 15% of the respondents are salaried, 12% of the respondents are professionals, 9% of the respondents are homemaker and 50% of the respondents are students.

CHART NO: 4.5

OCCUPATION

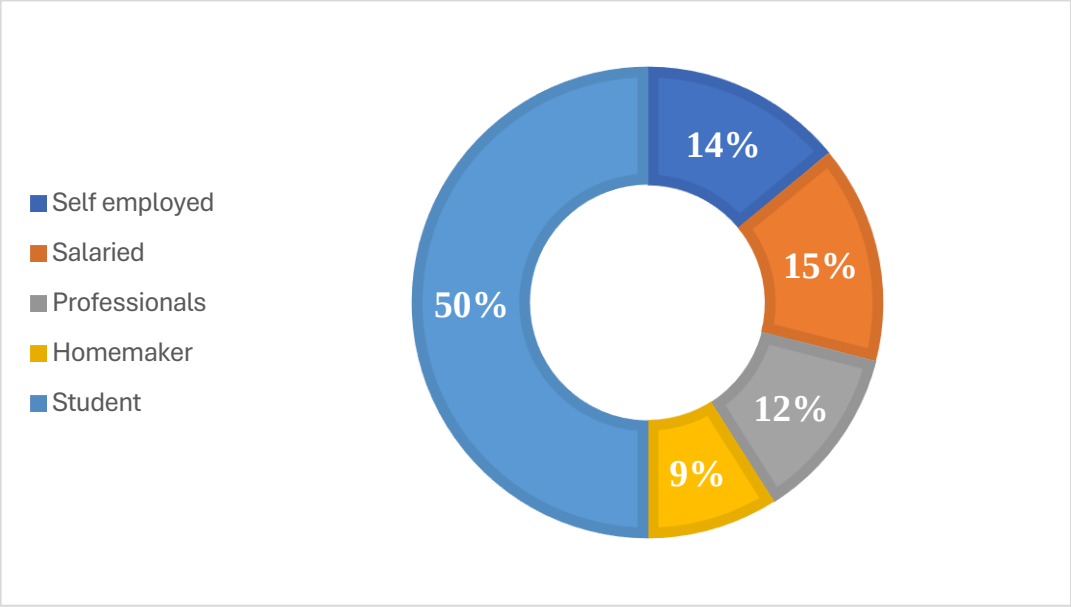

TABLE NO: 4.6

5.2 SUGGESTION

- To boost the awareness level of green marketing practices and benefit of the green products among the, The Government, and Non government organizations should conduct the many awareness programmes like street plays, television programmes, debates, etc.
- It is suggested that consumers are required to buy eco-labelled green products for their practices like star labelled electronic home appliances, etc.,
- Consumer must recommend the friends, relatives and relatives and neighbours to use the green prooducts. It will be benefited both individual circles and environment also.
- Manufactures should adopt modern technology or process or change absolute one to reduce environmental influence.
- Manufactures should have proper visibility logo while denoting a green products in packaging.
- Improve awareness about green products and their effectiveness.
- Green products should be priced according to its Quality.
- There should not be more price difference between Standard product and Green Product.
- Green Products Quality Should be better than Standard products.
- Transparency and accountability are essential for building trust with consumers.
- Customer feedback and engagement inform product development and improvement.

5.3 CONCULSION

The study reveals that while a growing number of consumers are aware of environmental issues and express positive attitudes toward green products, there is still a gap between awareness and actual purchasing behavior. Many consumers appreciate the benefits of eco-friendly products but are deterred by higher prices, limited availability, or skepticism about the authenticity of green claims. To bridge this gap, businesses need to focus on making green products more accessible and affordable, while also enhancing transparency about their sustainability efforts. Effective marketing strategies that emphasize both the environmental and personal benefits of green products can further incentivize consumers.

The consumers are having the positive attitude towards the consumption of the green products. Further, the consumers are absolutely satisfied with the green products quality, price, and features. The study also found that the consumers are willing to consuming the green products a long time and they are happily recommending using the green products friends, relatives, and neighbours. The consumers buying behaviour is good enough to use the green products.

APPENDIX

A STUDY ON CONSUMER ATTITUDE AND AWARENESS ON GREEN PRODUCTS (WITH SPECIAL REFERENCE TO SALEM CITY)

1. **Name of the respondent**
